

### We Believe in Making a Difference!

We, at OXYMAT, believe that economic growth and the continuous demand for development and general well-being of our society is linked to the health of our environment.

We believe that we can make a difference and we take our responsibility seriously.

Through our Environmental Management System, we actively work to reduce the environmental impact of our business activities and to continuously improve and innovate our products and business practices.

We have identified external and internal issues that are relevant to strategic direction and that impact our ability to achieve the intended result. These issues also include environmental situations that are influenced by us or can influence us. We are constantly monitoring and reviewing information on these external and internal issues.

### Our Commitment to a Healthier Environment

At OXYMAT we are committed to:

- Continually improve Environmental management system to enhance environmental performance.
- Prevent pollution and reduce our impact on the environment.
- Fulfill with all regulations and legislations including, but not limited to, ISO 14001 to protect the environment.
- We monitor environmental requirements and their possible environmental impact. We have set up a mechanism to manage this impact, which will reduce it and thus protect the environment as much as possible.

We also:

- Place great importance in the health of our employees and their comfort at work.
- Use water-based paints in our production facilities to reduce environmental polluting emissions.
- Are aware of how big an influence hazardous waste has on the environment; hence we strive not to create excess hazardous waste
- Implement an effective waste separation program to reduce the impact on the environment.
- Prefer the preventive approach; hence, equipment maintenance is part of our daily work.

Through regular training, we encourage our employees to raise environmental awareness in everything they do.

We believe that our efforts to support the environment will create a solid foundation for success for future generations – and for our business.
